Summary

Software Development Engineer with experience in designing and integrating RESTful APIs, managing data pipelines, and building fault-tolerant server-side systems. Strong foundation in clean architecture principles, database integration (MongoDB, Firebase, SQLite), and real-time communication. Experienced in shipping production-grade features with robust error handling and performance optimization.

Skills

Languages: JavaScript, TypeScript, Dart, C/C++, Python

Backend: Node.js, Express.js, REST APIs, WebSockets

Databases: MongoDB, Firebase, SQLite (sqflite), Hive

Architecture: Clean Architecture, MVVM, MVC

Tools: Git, GitHub, Postman, VS Code, Jira

Other: JWT authentication, CRUD API design, cron scheduling, rate limiting

Experience

Software Development Engineer - I Oct 2025 – Present

Sanora India Pvt Ltd

- Designed and developed RESTful APIs for authentication, content delivery, and real-time data synchronization using Node.js and Express.js.
- Built and maintained both frontend UI components and backend services, delivering full-stack features across 2 live production applications.
- Implemented clean architecture patterns (MVVM, MVC) on both client and server side, ensuring modular, testable, and maintainable codebases.
- Contributed 15+ major features and 10,000+ lines of production code; resolved 100+ critical bugs across frontend and backend layers.
- Optimized API response times and server-side performance through profiling, query optimization, and architectural improvements.

Associate Software Developer Oct 2024 – Oct 2025

SwaLay Digital

- Integrated RESTful APIs for data fetching, user authentication, and real-time content delivery in cross-platform applications.
- Implemented state management solutions (Provider, Riverpod) and collaborated on backend service integration workflows.
- Optimized application performance and reduced build times through code refactoring, profiling, and best practices.

Projects

QuestAI – AI Agent Backend

- Designed and built a resilient Node.js/Express backend serving AI agent capabilities over WebSocket and HTTP.
- Implemented WebSocket-based streaming for real-time response delivery with connection lifecycle management.
- Architected fault-tolerant request pipeline with retry logic, graceful degradation, and session persistence.
- Integrated third-party AI APIs with rate-limit handling, request queuing, and structured error responses.

Random Alarm App – Backend

- Designed and built a Node.js/Express backend for a random alarm scheduling application from scratch.
- Implemented RESTful APIs for alarm creation, retrieval, update, and deletion with full CRUD support.
- Managed alarm scheduling logic server-side with persistent storage in MongoDB and time-zone-aware trigger handling.
- Structured codebase following MVC architecture with clean separation of routes, controllers, and data models.

Subject Mastery | Play Store

- Integrated Firebase backend for authentication, session management, and content delivery.
- Built and exposed CRUD endpoints for user data, course content, and assessment records via REST APIs.
- Implemented secure API consumption with structured error handling, input validation, and retry mechanisms.
- Incorporated ML-based assessment integrity features via backend service integration.

Education

JSS Academy of Technical Education, Noida Aug 2021 – Jul 2025

Bachelor of Technology in Information Technology

CBN Sr. Sec. School Apr 2020 – Jun 2021

Higher Secondary Education
